

Frontier Pitts at IFSEC 2006

The Leading Manufacturer of
Gates, Barriers & Roadblockers

Frontier Pitts is the leading British manufacturer of Gates, Barriers and Road Blockers. We have over 70-years experience in the industry and offer a complete range of services including design, installation, maintenance, spares, repair or refurbishment and full project management. Our products include barriers, bollards, gates, road blockers and turnstiles, all of which are available with a wide range of control options. We have satellite offices in France, Hong Kong and China and 20% of all UK production is exported. We are proud to have equipment installed in more than 83 countries around the world.

On Stand D156 at IFSEC 2006, visitors can view our stand incorporating our fresh look and the Crash footage of Frontier Pitts new Anti-Terra Series. The range includes the Terra Gate which is the first gate in the World to be impacted in both the half open and fully closed positions. The Terra Gate has been nominated for Best New Physical Security Product at this year's IFSEC Security Industry Awards.

The Terra Blocker, Terra Bollards (crash tested in both single and dual unit systems) and the Terra Beam complete the high security range. All crash tests have resulted in the equipment successfully stopping a 7,500kg lorry travelling at 50mph, whilst still continuing to operate after impact. The tests were conducted in accordance with the Department of State K12 standard and the PAS 68-69 standard. All this crash footage will be on view.

Also on display will be the FBX Barrier; our best-selling automatic rising arm barrier, our hydraulically operated Road blocker and Hydraulic Bollard. Both our Technical Sales and Maintenance Representatives will be on hand to discuss all of our products and services.

The IFSEC exhibition will also be a great opportunity to introduce clients and visitors to the new personnel who have joined Frontier Pitts within the last year, including the new Sales Representatives for the North and South East of England, our new Internal Sales and Maintenance Managers

From our wealth of product experience and knowledge, Frontier Pitts has the solution to any perimeter security challenge. Whatever your requirements or specifications, Frontier Pitts can manufacture a highly visible deterrent or a discreet but effective system. The breadth of our product range, from simple speed ramps or manual bollards to fully cantilevered gates and impact-resistant equipments, means we can supply security equipment for virtually any situation. Our network of Regional advisors will visit any site in the UK, without charge or obligation, in order to offer advice on the most appropriate and effective means of upgrading perimeter security.

Frontier Pitts will be exhibiting at IFSEC on Stand D156 of Hall 6, between the 8th and 11th of May 2006.
